District 7, Ho Chi Minh City

(+84) 858.111.879 ◇ nguyennhattan.work@gmail.com

EXECUTIVE SUMMARY & CAREER OBJECTIVE

As a Full Stack Developer with 4 years of experience, I have a strong foundation in ReactJS, TypeScript, NextJS, and Java Spring Boot. My goal is to contribute to a dynamic company's success as a Full Stack Developer, continuously learning and improving to deliver effective solutions. I stay up-to-date with the latest software development technologies and best practices, striving to become a valuable asset to any team I join.

WORK EXPERIENCE

Middle Full Stack Developer, FPT Information System (FPT IS)

09/2025 – Present

Project: Data Platform

Team Size: 8 members

Job overview and responsibilities:

- Designed, developed, and maintained backend services using Java Spring Boot.
- Implemented data access layers with Spring Data JPA and optimized performance using native SQL queries.
- Developed real-time data communication features using WebSocket and Server-Sent Events (SSE).
- Applied Spring Validation to ensure data integrity and request correctness.
- Secured APIs and system access using Spring Security.
- Built event-driven data pipelines using Apache Kafka for asynchronous processing.
- Implemented search and analytics features with Elasticsearch.
- Set up centralized logging and monitoring using ELK Stack (Elasticsearch, Logstash, Kibana) along with Filebeat and Metricbeat.
- Worked with both relational and NoSQL databases including PostgreSQL and MongoDB.
- Developed user interfaces using ReactJS and Material UI (MUI).
- Participated in system design discussions, code reviews, and cross-team collaboration.

Technologies Used:

- **Backend:** Java Spring Boot, Spring Data JPA, Spring Validation, Spring Security, WebSocket, Server-Sent Events, Kafka
- **Search & Monitoring:** Elasticsearch, Logstash, Filebeat, Metricbeat, Kibana
- **Frontend:** ReactJS, Material UI (MUI)
- **Database:** PostgreSQL, MongoDB
- **Big Data:** Hadoop

Middle Full Stack Developer, FPT Information System (FPT IS)

04/2025 – 09/2025

Project: Big Data System

Team Size: 10 members

Job overview and responsibilities:

- Developed and maintained scalable Spring Boot microservices architecture.
- Utilized OpenAI API for analytics, forecasting, and statistical insights based on data from Excel files and multiple databases (PostgreSQL, MongoDB, MySQL, SQL Server, Oracle).
- Integrated Redis for caching and Elasticsearch for advanced search functionalities.
- Set up centralized logging infrastructure by collecting application logs with Logstash.
- Designed and deployed Kafka-based messaging systems for real-time event processing.
- Secured applications with Spring Security.
- Built responsive UIs with ReactJS and TypeScript.
- Containerized services using Docker for local and production environments.
- Collaborated using Jira for agile planning and sprint tracking.

Technologies Used:

- **Backend:** Spring MVC, Spring Web Flux, Spring Security, Spring Data JPA, Kafka, Redis, Elasticsearch, Logstash, Hibernate(Native SQL queries)
- **Frontend:** ReactJS, TypeScript
- **AI:** OpenAI API
- **Database:** PostgreSQL, MongoDB
- **Deployment:** Docker, GitLab
- **Project Management:** Jira

Full Stack Developer, TMA Solutions

07/2024 – 03/2025

Project: AI Automation Test System

Team Size: 8 members

Job overview and responsibilities:

- Utilized Azure OpenAI to generate test cases and execute them in real-time.
- Implemented WebSocket and Event Stream technology for real-time data & real-time logging.
- Developed a hierarchical structure for managing test cases.
- Created an agent to run test cases and view test reports.
- Set up a deployment pipeline.
- Developed and implemented an integrated video recording system to capture test case execution.

Technologies Used:

- **React (TypeScript):** Radix for theming, CodeMirror for the code editor
- **Java:** Spring Security, Spring WebSocket, Spring OAuth2, Spring JPA, Spring Actuator, Spring Mail, Schedule, Spring Data Redis, Spring Doc, Fasterxml Jackson(JSON library), JGit, Lombok, Gradle
- **Azure OpenAI:** For test case generation
- **WebSocket & Event Stream:** For real-time data & logging
- **Python:** For automation scripts
- **Database:** SQL Server

- **Docker:** Set up agents for running test cases using Cypress, Selenium (Python, CSharp) and Playwright (Python)
- **DevOps:** Kubernetes, Linux Scripting, CI/CD pipelines with Azure DevOps
- **Code Quality and Analysis Tools:** Sonar, Checkstyle, Vitest, Junit, Mockito, ESLint, Prettier

Full Stack Developer, TMA Solutions

04/2023 – 06/2024

Project: Semantic Search

Team Size: 15 members

Job overview and responsibilities:

- Contributed to the design and development of semantic search features.
- Collaborated with cross-functional teams to implement new search algorithms.
- Integrated Azure AI Search and OpenAI to enhance semantic query capabilities.
- Developed and optimized data crawling solutions using Python and FastAPI.
- Set up a deployment pipeline.

Technologies Used:

- **React (TypeScript):** Vite, Radix, Tailwind, React Hook Form, @stomp/stompjs (WebSocket), Axios, ESLint, Prettier, ag-grid-react, Husky, ChartJS
- **Java:** Spring Security, Spring OAuth2, Spring JPA, Spring WebSocket, Spring Data, Spring Data Redis, Spring Actuator, Spring Mail, Lombok, Spring Session, Spring Doc, Gradle
- **Azure Services:** Azure AI Search, Azure OpenAI, Redis, Azure Storage Account, SQL Server
- **Python:** FastAPI, Scrapy (Data Crawling), Playwright, WebSocket
- **Docker:** Setup agents to crawl data from a specific site
- **DevOps:** Kubernetes, Linux Scripting, CI/CD pipelines with Azure DevOps
- **Code Quality and Analysis Tools:** Sonar, Checkstyle, Vitest, Junit, Mockito, ESLint, Prettier

Full Stack Developer, TMA Solutions

01/2022 – 03/2023

Project: DHP Eventbus

Team Size: 6 members

Job overview and responsibilities:

- Developed new features for existing projects.
- Maintained and supported existing features.
- Implemented unit tests for developed features.
- Configured infrastructure for deployment.

Technologies Used:

- **React (TypeScript):** Vite(migrate from create-react-app), Micro Frontend, Webpack, Antd, Web-Socket (stompjs), Axios, ESLint, Prettier, Husky
- **Java:** Spring Web, Apache Pulsar, Spring JPA, Spring Cloud Vault, Fasterxml Jackson (Json library), Spring security, Spring Mail, Spring Doc, Gradle
- **SQL Server:** Database management and optimization
- **DevOps:** Azure DevOps, Kubernetes, Docker

- **Testing:** Jest (UI testing), Mockito & JUnit (Backend testing), Selenium (Automation testing)
- **Code Quality and Analysis Tools:** Sonar, Checkstyle, Junit, Mockito, Jest, ESLint, Prettier

PROJECTS

Flow Chart App

06/2023 – Present

Technologies Used: NextJS, Next Auth, MUI, Java Spring Boot, Tailwind, PostgreSQL, Azure DevOps, Jest

Description: An editor for building charts and diagrams.

Repo: [Flow Chart App](#)

Website: tannguyen.id.vn

SKILLS

Hard Skills

- ReactJS, TypeScript, Java Spring Boot, NextJS, NodeJS
- Antd, Material UI, Radix, ChartJS, Highcharts, React Ag-Grid
- Java (Spring Boot, Spring Security, Spring Data JPA, Spring OAuth2, Schedule, Spring Data Redis, Spring Mail, Spring Actuator, Spring Cloud, Lombok, Hibernate)
- HTML, CSS, JavaScript (ES6+), Responsive Design
- OAuth2, JWT for authentication and authorization
- Redis, Apache Kafka, Apache Pulsar, RabbitMQ
- Elasticsearch, Logstash for search and logging
- OpenAI API, Azure OpenAI
- Docker, Kubernetes, GitLab CI/CD, Azure Pipeline
- SQL Server, PostgreSQL, MongoDB, MySQL, Oracle
- Design Patterns, Clean Code, Microservices Architecture
- Sonar, Checkstyle, Gradle, ESLint, Prettier

Soft Skills

- Teamwork
- Agile, Kanban

EDUCATION

Can Tho University

09/2018 - 09/2022

Major: Information Technology

GPA: 3.42/4

ACHIEVEMENTS

- **TMA Star Performers:** Recognized for outstanding contributions and performance at TMA Solutions.
